

## REPLACEMENT NOTES AND SHIFTS

by Lou Fontaine, #109

The next scan is from the same bundle as the one in which the replacement was found and there is certainly a dramatic shift to the right. It obviously was missed because under normal circumstances this one should have been replaced.

It was an anxious time awaiting the replacements for the new S-24F series. I have finally seen my first one and it is 3 9's. I was not sure whether to expect a 1 or a 9. Since S-23F replacements begin with a 9 it is not too surprising that S24F begins with a 9 also. From the serial number it can be seen that there are not too many out yet.

The replacement for the 50 cents S-20 is a lot more plentiful. From the example shown here it can be seen that the lower number is somewhat blurred and is shifted to the left. The number after the replacement is in normal position.

## UP-DATE TO "MISSING "A" VARIETY" CTC-S20B - 5¢

by Lou Fontaine - CM0000109

After making a gasoline purchase at the local gas bar I was checking the 5 cent value when I noticed that the A in Canada was partially missing. Roger Fox reported the missing A variety in a previous bulletin. When compared to the one that Roger discovered it was readily apparent that they were not the same. The A in Canada in Rogers example is completely missing while the one I found shows a very small portion of the A. It looks like "CANAD". The scan I made is of 4 sequential serial numbers where the lowest number is a partial A, the next 2 are perfectly normal and the last one is the partial A.
