

WANDERING NUMBERS

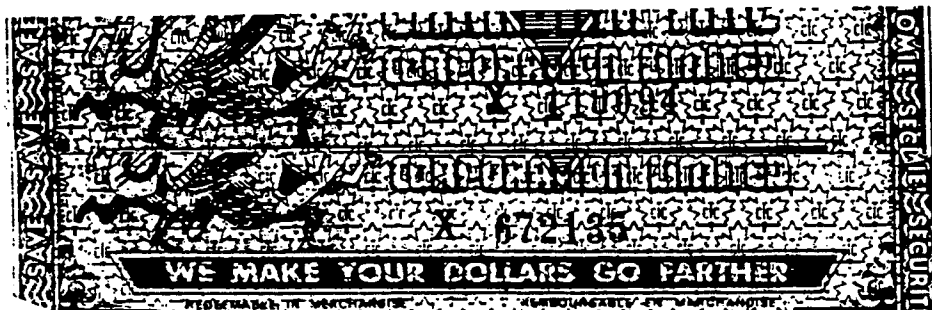

Ross Irwin

Shucks, where did the "1" go???

Left and right - "X" under the 1st "R"; and, "X" under the 2nd "R"

Up and down - "X" near top and bottom of space

The die used to print the coupon serial number was one inch wide. Below you will notice the prefix "Y", an unused space which appears to be constant and then six numbers. The distance between the "Y" and the final "9", is one inch.

Now look at the strange coupon below. The overall distance is still one inch but for some reason a single "0" has been introduced, and two spaces between the "Y" and the "0" ?????? I don't consider these variations to be collectable, but at least they are interesting.
