

EXTRA GAS BAR VARIETIES - ATLANTIC REGION

by Don Bradt #150

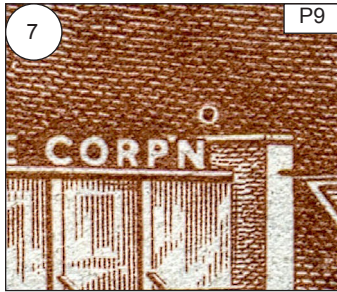

If you look closely at Volume II of the Bilodeau Guide, you will notice that there are some varieties that have been skipped over. For a variety to make the Guide there has to be at least 3 known examples and there has to be a fair range in the serial numbers. There's no point in cataloguing a variety if one person has all of them, even if it's present on all 500 coupons in a brick. There were quite a few varieties that I catalogued that didn't pass the above rule of thumb.

I'm hoping that people will examine their collections and search for the following coupons. If we can find extra examples, we may be able to add them to the guide.

Most of the pictures are enlarged four times. The initials "RW" stand for Ron Wilkie (member #678). These coupons belong to him.

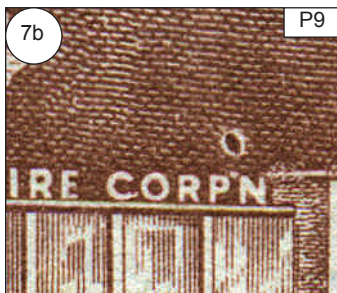

The alphanumeric in the square boxes are grid numbers and refer to the grid system invented by Everett Runtz (member #772). One transparent grid is included with the purchase of the Bilodeau Guide, Volume II.

Here are some of the coupons in my collection that didn't pass the test. If you find any of these would you contact Don Bradt, 2051 Beaverhill Drive, Ottawa ON K1J 6N9 or E-mail: donbradt@rogers.com.

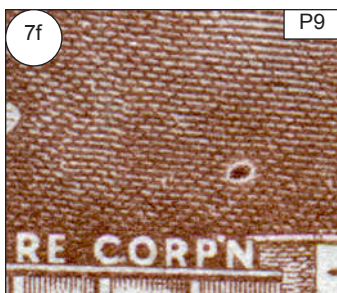

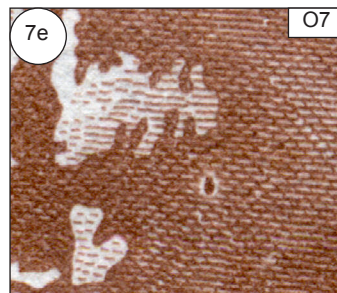

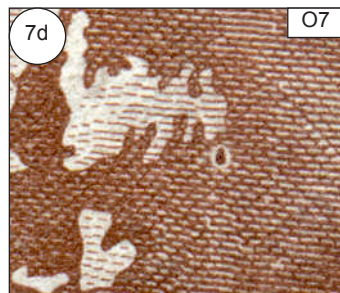

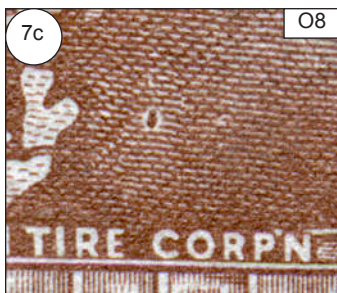

This is CTC 9-D1-ba7 that is described in the Bilodeau Guide, Volume II, page A-22 to A-23

EXTRA GAS BAR VARIETIES - ATLANTIC REGION - continued

by Don Bradt #150

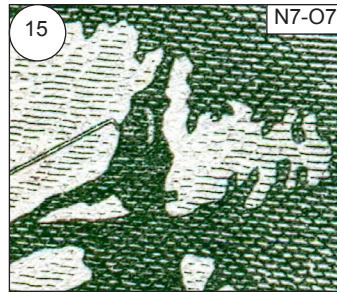

Variety ba7 is somewhat like the 25¢ wandering blob. Variety ba27 doesn't exist. It turned out to be a duplicate and the number will probably be reused for a future variety.

If there is sufficient interest, I will identify more gas bar coupons that have been catalogued but didn't make it into the

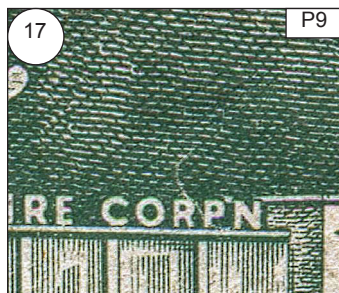

Bilodeau Guide in future articles. A main reason for identifying all these minor glitches is to try to locate Gas Bar replacement coupons. I have found 3 so far.
